

## GfE Metalle und Materialien GmbH

GfE is a worldwide leading manufacturer of sputtering targets, arc cathodes and evaporation materials for the PVD thin film technology. Our high quality customized products made of pure metals, alloys, oxides and cermets are used in a wide range of applications, such as architectural glass, thermal solar applications and thin film photovoltaics. GfE coating materials for wear resistance coatings significantly extend the service life of tools and thus lower the production costs and the environmental impact. The use of our products in the electronic industry allows for miniaturization and an improvement in efficiency. In optical applications PVD layer systems are used in the manufacture of e.g. laser mirrors, colour filters, special filters and high quality layer systems in ophthalmics.

Constantly high quality and cost efficiency are musts. In the development of our products we focus on our customer's requirements and provide effective solutions in close cooperation based on more than 20 years of experience.

GfE's world wide sales channels and sales offices in Asia and the US enable us to individually serve and locally support our customers.

GfE is a subsidiary of AMG Advanced Metallurgical Group N.V., Netherlands, a global leader in the production of specialty metals and metallurgical vacuum furnace systems.
